TABLE OF CONTENTS

Important Safety Precautions

Prior to shipment from the factory, JVC products are strictly inspected to conform with the recognized product safety and electrical codes of the countries in which they are to be sold. However, in order to maintain such compliance, it is equally important to implement the following precautions when a set is being serviced.

● Precautions during Servicing

1. Locations requiring special caution are denoted by labels and inscriptions on the cabinet, chassis and certain parts of the product. When performing service, be sure to read and comply with these and other cautionary notices appearing in the operation and service manuals.

2. Parts identified by the ⚠ symbol and shaded (▒) parts are critical for safety.
   Replace only with specified part numbers.
   Note: Parts in this category also include those specified to comply with X-ray emission standards for products using cathode ray tubes and those specified for compliance with various regulations regarding spurious radiation emission.

3. Fuse replacement caution notice.
   Caution for continued protection against fire hazard.
   Replace only with same type and rated fuse(s) as specified.

4. Use specified internal wiring. Note especially:
   1) Wires covered with PVC tubing
   2) Double insulated wires
   3) High voltage leads

5. Use specified insulating materials for hazardous live parts. Note especially:
   1) Insulation Tape
   2) PVC tubing
   3) Spacers
   4) Insulation sheets for transistors
   5) Barrier

6. When replacing AC primary side components (transformers, power cords, noise blocking capacitors, etc.) wrap ends of wires securely about the terminals before soldering.

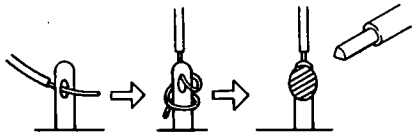

Fig. 1

7. Observe that wires do not contact heat producing parts (heatsinks, oxide metal film resistors, fusible resistors, etc.)

8. Check that replaced wires do not contact sharp edged or pointed parts.

9. When a power cord has been replaced, check that 10–15 kg of force in any direction will not loosen it.

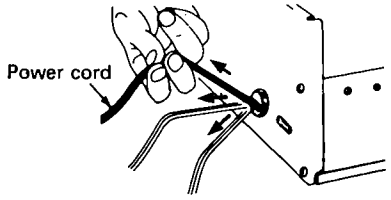

Fig. 2

10. Also check areas surrounding repaired locations.

11. Products using cathode ray tubes (CRTs)
    In regard to such products, the cathode ray tubes themselves, the high voltage circuits, and related circuits are specified for compliance with recognized codes pertaining to X-ray emission. Consequently, when servicing these products, replace the cathode ray tubes and other parts with only the specified parts. Under no circumstances attempt to modify these circuits. Unauthorized modification can increase the high voltage value and cause X-ray emission from the cathode ray tube.

12. Crimp type wire connector
    In such cases as when replacing the power transformer in sets where the connections between the power cord and power transformer primary lead wires are performed using crimp type connectors, if replacing the connectors is unavoidable, in order to prevent safety hazards, perform carefully and precisely according to the following steps.

    1) **Connector part number** : E03830-001
    2) **Required tool** : Connector crimping tool of the proper type which will not damage insulated parts.
    3) **Replacement procedure**
       (1) Remove the old connector by cutting the wires at a point close to the connector.
       Important : Do not reuse a connector (discard it).

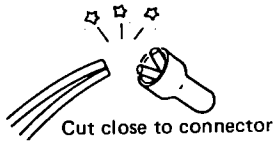

Fig. 3

(2) Strip about 15 mm of the insulation from the ends of the wires. If the wires are stranded, twist the strands to avoid frayed conductors.

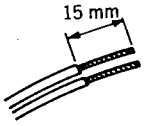

Fig. 4

(3) Align the lengths of the wires to be connected. Insert the wires fully into the connector.

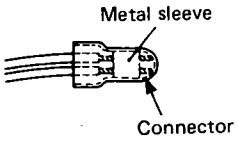

Fig. 5

(4) As shown in Fig. 6, use the crimping tool to crimp the metal sleeve at the center position. Be sure to crimp fully to the complete closure of the tool.

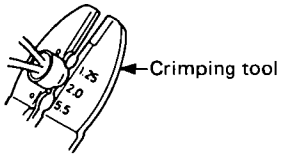

Fig. 6

(5) Check the four points noted in Fig. 7.

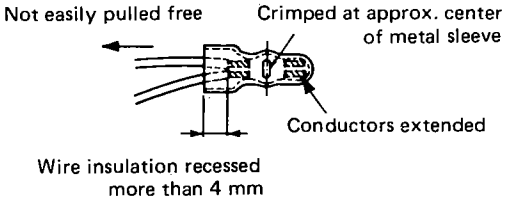

Fig. 7

● Safety Check after Servicing

Examine the area surrounding the repaired location for damage or deterioration. Observe that screws, parts and wires have been returned to original positions, Afterwards, perform the following tests and confirm the specified values in order to verify compliance with safety standards.

1. Insulation resistance test

Confirm the specified insulation resistance or greater between power cord plug prongs and externally exposed parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

2. Dielectric strength test

Confirm specified dielectric strength or greater between power cord plug prongs and exposed accessible parts of the set (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.). See table 1 below.

3. Clearance distance

When replacing primary circuit components, confirm specified clearance distance (d), (d') between soldered terminals, and between terminals and surrounding metallic parts. See table 1 below.

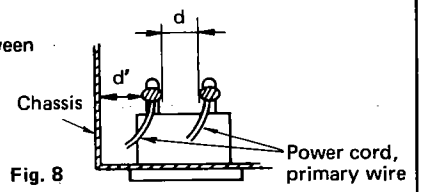

Fig. 8

4. Leakage current test

Confirm specified or lower leakage current between earth ground/power cord plug prongs and externally exposed accessible parts (RF terminals, antenna terminals, video and audio input and output terminals, microphone jacks, earphone jacks, etc.).

Measuring Method: (Power ON)

Insert load Z between earth ground/power cord plug prongs and externally exposed accessible parts. Use an AC voltmeter to measure across both terminals of load Z. See figure 9 and following table 2.

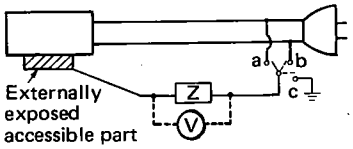

Fig. 9

5. Grounding (Class I model only)

Confirm specified or lower grounding impedance between earth pin in AC inlet and externally exposed accessible parts (Video in, Video out, Audio in, Audio out or Fixing screw etc.).

Measuring Method:

Connect milli ohm meter between earth pin in AC inlet and exposed accessible parts. See figure 10 and grounding specifications.

SECTION 1
GENERAL DESCRIPTION

1.1 DETAIL OF ALTERATIONS

Recent products of the BR-S822U/BR-S622U/BR-S522U/BR-S525U have undergone alteration in the mechanism assembly and the FM AUDIO circuit for improvement of the workability and reliability.
The following table shows changes in the main parts with the serial numbers that are subject to the alterations of this time. For changes in exploded views and parts list, refer to the SECTION 5.

Note : This service manual mentions the parts that are changed this time and the replacing procedure of them, etc. Therfore, use this service manual together with the service manuals issued for the respective models.

SECTION 2
MECHANISM ADJUSTMENT

2.1 CHANGES IN MECHANISM ASSEMBLY

In regard of the mechanism assembly, the mechanism used in the BR-S800U/BR-S500U is partially used in the 22 series, too, in order to improve workability in replacing parts such as the loading motor, pinch roller, etc.
The following table shows the main parts of the mechanism assembly with their standard replacement time.
The parts that are changed this time are shaded in the table.
Besides them, the tension release solenoid and parts related to it are removed in the 22 series. For detail of the exploded view and part numbers, etc., refer to the exploded view in the SECTION 5 and parts list.

1	**A/C head (Change)** **— Removal —**	(1) **Tools to prepare:** • **Ordinary screwdriver (−)** • **Nut driver : 5.5mm** (2) Disconnect the connectors from the A/C HEAD board. (3) Remove the taper nut ① for X-value adjustment. (4) Remove the nut ② and then remove the A/C head together with the head base with care not to lose the spring ③. (5) Remove two screws ④ and a screw ⑤ to remove the A/C head. At that time pay careful attention to the spring ⑥ not to lose it. (6) Unsolder the A/C HEAD board and replace the A/C head with new one.

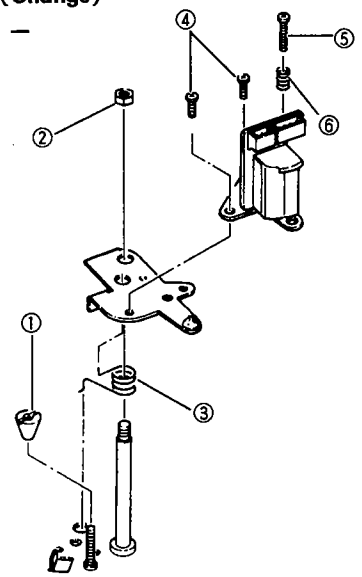

Fig. 2-1

— Reinstallation —

(1) Before assembling the A/C head to the main deck, conduct rough adjustment of the head height as shown in Fig. 2-2.

(2) Assemble the A/C head and its peripheral parts to the main deck in the reverse order of the disassembly.

(3) When fitting the taper nut, temporarily adjust the height as shown in Fig. 2-3.

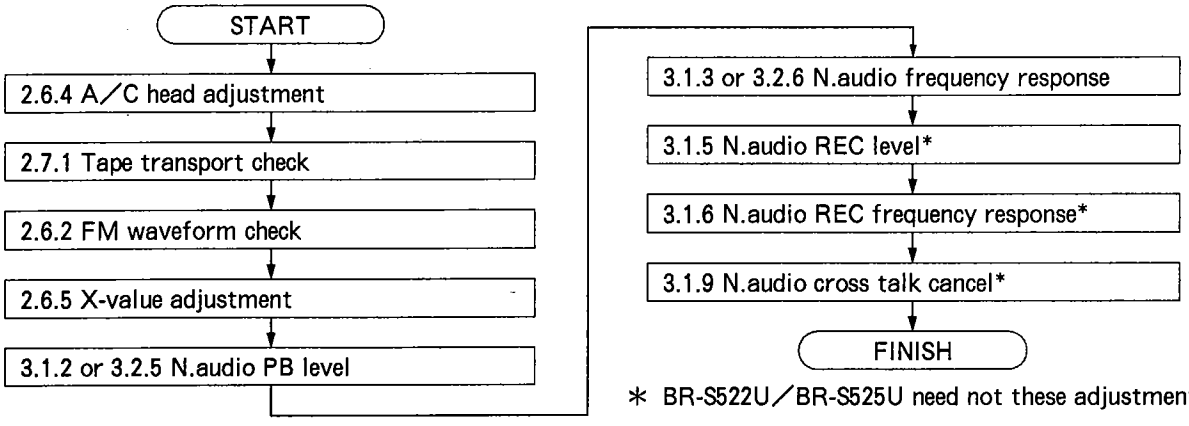
Note:
Before confirming normal tape transport, do not use any alignment tape to provent it from damage. Make sure to check tape transport with an ordinary recording tape beforehand.



* BR-S522U/BR-S525U need not these adjustments.

Note : This service manual mentions the parts that are changed this time and the replacing procedure of them, etc. Therfore, use this service manual together with the service manuals issued for the respective models.

2	**Pinch roller arm assembly (Change)**  Fig. 2-4	***Note:*** ***Proceed to do the following work in the Assembly mode (see 2.4.1).*** (1) Remove the noise shutter. (BR-S525U only) ***Note: When installing the noise shutter to the pinch roller assembly, make sure to set the pinch roller assembly to downmost position or remove it.*** (2) Remove two scres ① and lift the pinch roller arm assembly upward to remove it. (3) When reinstalling, do it so as to position the cam of the pinch roller assembly on the rail of the solenoid bracket in the assembly mode. (4) Aseemble the noise shutter to the pinch roller arm assembly. (BR-S525U only)
3	**Mode motor (Change)**  Fig. 2-5	(1) Disengage the belt from the motor pulley. (2) Remove two screws ① and one screw ②, then detach the mode motor together with the motor bracket. (3) Remove two screws fixing the mode motor to the motor bracket to detach the motor from the bracket. (4) Unsolder wires and remove the motor from the board.
4	**Pinch roller solenoid position (Addition)**  Fig. 2-6	(1) Turn the mode motor in the direction of loading (toward the rear side) to set the mechanism in the loading end state. (2) Turn the mode motor further in the same direction (rewarward) to move the pinch roller arm to the downmost position. (3) Press down the solenoid lever moreover while checking that the reading of the stroke from the step (2) to the moreover pressed point is 1±0.5 graduation on the scale located on the solenoid lever. (4) When reading is out of 1±0.5 graduation, loosen the two screws and adjust the solenoid position.

Note : This service manual mentions the parts that are changed this time and the replacing procedure of them, etc. Therfore, use this service manual together with the service manuals issued for the respective models.

5	**Full erase head (Addition)**  Fig. 2-4	(1) Remove one screw ①. (2) Disconnect wires from the full erase head and then lift the full erase head for removing. (3) Fix the full erase head and the full erase head base to the main deck with the screw ① as shown in the figure. (4) Check that the full erase head and the base are firmly fixed to the main deck. (5) If the full erase head is in unstable setting, slide the full erase head in the direction of the arrow (away from the drum assembly) and fix it again.
6	**Pole base assembly (Change)**  Fig. 2-5	(1) Remove the mechanism ass'y (see 2.3.8). (2) Remove two stoppers ③ and lift the pole base assembly for removing with care of the collar between the pole base and stopper not to lose it. (3) **Supply pole base** ① Turn the loading motor counterclockwise to set the mechanism to the loading end position. ② After removing the stopper, lift the pole base ass'y upward while removing it. (4) **Take-up pole base** ① Remove the A/C head ass'y. ② Remove two screws ① and three screws ②, then take the T.U. loading ass'y away. When removing the screws ②, be careful not to lose spacer. ③ Remove two stoppers ③ and lift the pole base ass'y upward to remove it. (5) For installing the T.U. loading assy pay careful attention to the item No.2 of "2.4 Assembling of Mechanism". (6) After replacing the TU pole base, check the following items. ① A/C head adjustment (see 2.6.4). ② Tape transport check (see 2.7.1). ③ FM waveform check (see 2.6.2).

SECTION 3
ELECTRICAL ADJUSTMENT

With the change that the FM AUDIO PRE/REC AMP board is incorporated in the AUDIO-3 board, adjustment procedure of the audio circuit is changed to as mentioned below.
Therefore, for adjusting the audio circuit with the new AUDIO-3 board (PRK10115) refer to the procedure mentioned below, while for adjusting the circuit with the old board (PRK10062) refer to the service manual issued previously.

***Note** • All adjustment values are balanced values with 600Ω resistance.*
• Turn off the MEMORY switch No.201 (DOLBY NR) unless otherwise indicated.
• When using an oscilloscope for observing waveforms, etc., use the 10:1 probe.

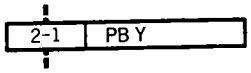
SECTION 4
DIAGRAMS AND CIRCUIT BOARDS

■ FOREWORD

1. Expression of connector

Connector is expressed in two ways.

1) The following illustrates 'CN2 pin 1' for example.



2) The following illustrates 'CN1 pins 1 and 2'.

2. Expression of wiring

As the following circuit diagram is divided to print on some sheets, such an indication as the following is found in the case the wiring extends over two or more divided sections.

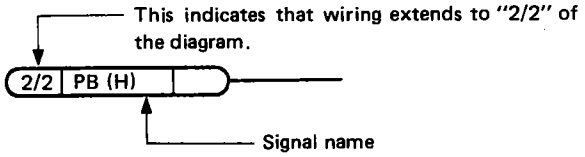
1) Circuit diagram divided into two or more sections:

Board No.	Board Name	Number of divided sections
02	MOTER-2	2 (1/2~2/2)
10	REC/PB Y	2 (1/2~2/2)
12	REC/PB COLOR	2 (1/2~2/2)
19	OUTPUT	2 (1/2~2/2)
21	AUDIO-1	3 (1/3~3/3)
23	AUDIO-3	2 (1/2~2/2)
31	M CTL/REEL SERVO	2 (1/2~2/2)
—	OVERALL	2 (1/2~2/2)

2) Indication of wiring which extends to another section:

(Example)

On the "1/2" diagram of REC/PB Y board, such an indication as the following is found on the "PB (H)" signal line.



In the above case, the end of the wiring is connected to the "2/2-PB (H)" on the 2nd section of the diagram.

3. Wiring of connector

(Example)

In the above example, CN1 is connected with CN2 on 1 2 SYSCON board.

Note: When one end of the connector's wiring is the MOTHER board, further destination of the wiring after the MOTHER board is shown in ( ) nearby the connector.

4. Signal flow on the diagram

The following arrow marks indicate the specified signal paths respectively.

- ➡ : RECORDING or EE signal path
- ⇨ : PLAYBACK signal path
- ➡ : REC/PLAY signal path

5. Measurement of voltage and waveform

1) Voltage

Measured by digital voltmeter in REC mode.

Value in ( ) shows voltage in S-VHS PB mode, and it is indicated only in the case PB voltage is different from that in REC.

2) Waveform

Video: Unless otherwise indicated, (a) color bars signal input through LINE IN terminal in REC in S-VHS mode, (b) color bars signal of MHV-2H alignment tape in PB.

6. Unit of value

Unless otherwise specified:

1) Resistance is in Ω (1/6 W)
2) Capacitance in μF
3) Inductance in μH
4) Screened parts (in ▒▒) are important for safety assurance. When replacing them, use specified parts.
5) Values without any indication in ( ) are common to the BR-S822, BR-S622, BR-S522 and BR-S525.

4.1 CIRCUIT BOARD LOCATIONS

• Index to board by kind of diagram

This section contains merely the diagrams of the circuit boards that have been changed. For other circuit boards, refer to the service manual for BR-S822U/BR-S622U/BR-S522U/BR-S525U.
The Board Numbers (□□) appearing in this section are the same as those in the service manual.

SECTION 6
ELECTRICAL PARTS LIST

Notes:

- Parts identified by the ⚠ symbol critical for safety. Replace only with parts having the specified parts numbers.

- Since this section only the following boards which are different from those of original models.
  - MOTHER-1 board
  - MOTHER-2 board
  - AUDIO-3 board
  - AVM/ON SCREEN board

  For other board assemblys, refer to the service manual No. 9246C for the BR-S822U/BR-S622U/BR-S522U, No. 9272 for the BR-S525U.

- In case Model Name(Example:S822U)indicate on the header or Part Name column of the P.C. board assembly lists, event the part or the P.C. board assembly is for exclusive use of the specified models.

  Example 1 :
  R147 QRSA08J-332YN RESISTOR, S822U/S622U 3.3 kΩ, 1/10W
  In this case, the resistor (R147) is used in the BR-S822U, the BR-S622U only.

  Example 2 :
  — AUDIO-6 BOARD ASS'Y, BR-S822U/BR-S622U —
  PWBA PRK30066A1 AUDIO-6 BOARD ASS'Y
  In the above case, the AUDIO-6 Board Ass'y is the circuit board assembly that exclusively used for the BR-S822U, the BR-S622U.

Parts without any remark are used in both the models in common.
